

FRIESEN in a new and innovative design, set up for break-proof transport!

Safe and innovative packaging guarantees Friesen customers optimal and easy storage of goods.

Stable fixings within the cardboard boxes prevent the units from slipping and being damaged during transport. And of course old core can be returned in the same packaging ensuring that it arrives safely and that your old core account is being settled quickly.

- Parts secured on all sides with stable fixings
- Rapid processing of old core returns
- Dust-proof and dirt-repellent packaging
- Old core arrives safely for remanufacturing

The high quality, stable, glazed board clearly increases the value of the product, gives the whole warehouse a cleaner appearance and makes it easier for Friesen customers' warehouse staff to quickly store units. This packaging has also been introduced in England in the meantime and is desired by Quinton Hazell customers.

Gut gemacht.
